# KOREK TELECOM

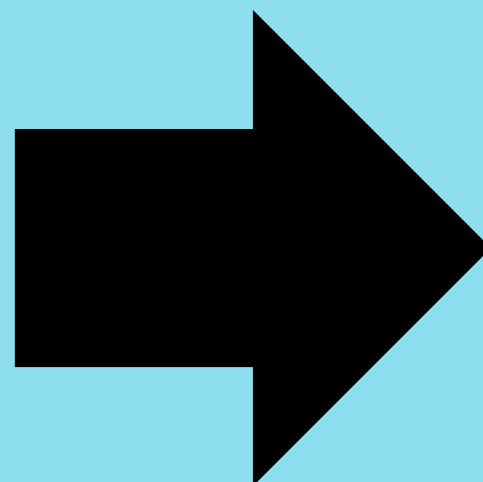

That sounds like an exciting day! Attending classes and going on a field trip to Korek Telecom Company must have been really interesting. Seeing their facility and servers up close must have been a great learning experience.

## M.r taha gives us information

Mr. Taha sounds like a really knowledgeable and respected manager! It's fascinating how he emphasized the importance of physics in their technology, especially in power management and antenna placement. The intricate calculations they use to determine optimal antenna locations must be quite impressive. It's amazing how they ensure maximum efficiency and effective coverage.

Mr. Taha really made a point about the significant impact of radio waves on the brain, even though we can't perceive it. He stressed the importance of being cautious. To minimize exposure, he recommended using speakerphones or Bluetooth devices. His speech not only showcased the company's innovative technologies but also highlighted their commitment to public safety and ethical technological advancement. It's great to see a company prioritize both innovation and responsibility

and then Mr.Mohammed talked about 4G  
and 5G

When we stepped into Korek Telecom's  
server room, it was like entering a top-  
secret zone! No phones allowed, showing  
how sensitive the equipment is. They kept  
the room cool with efficient coolers to  
make sure the servers run smoothly.
